Frameworks and Libraries: Node.JS, React.JS, Express.JS
Tools: Git, Linux, Terminal, AWS, OSI, JWT
Relevant Course Work: Object-Oriented Programming, Data Structures, Web technologies, Databases

PROJECTS

Stock Option Screener: *Javascript, React.JS, Node.JS, Express.JS*

A stock option screener to help guide purchasing judgement on a stock opportunity. Built using a ReactJS frontend and NodeJS backend. Utilizes a custom REST API to communicate between the server and client. Further stock data is sourced from 3rd party API providers. Database for user accounts uses a NoSQL solution with modern encryption and data integrity protocols.

Language Modeling: *Python*

Use of modern natural language processing techniques and algorithms to provide the likelihood of a sentence occurring or to predict what is the most likely next word in a sentence. Used as the algorithm for tools such as auto-correct and auto-complete. Model was built on a tri-gram model with smoothing.
